CAPABILITY STATEMENT · ISSUE 2026

WESTERN AUSTRALIA'S ONLY ROBOTIC KITCHEN EXHAUST SPECIALIST

Precision. Technology. Compliance.

Advanced equipment and proven methodology for professional commercial kitchen exhaust cleaning.

Built for the environments that matter.

A Western Australian specialist in robotic kitchen exhaust cleaning, digital grease measurement and commercial kitchen hygiene — not a general cleaning company. Prepared for facility managers, procurement, QSR operators and multi-site groups.

01
ROBOTIC PLATFORM IN WA

WA
PERTH METRO RESPONSE

SPECIALIST, NOT GENERAL

Robotic exhaust, digital measurement and commercial kitchen hygiene only.

FIRE-RISK ENVIRONMENTS

The work sits where fire load, food safety and trading hours meet.

DOCUMENTED PROCESS

Eight numbered steps and a job file a facility manager can show.

PERTH & WA COVERAGE

Planned programmes and emergency response across the Perth metro.

Verified operating facts.

Not invented metrics. These figures come from the live Grade X offering, methodology and evidence pack.

OPERATING FACTS

21 COMMERCIAL SERVICES

08 STEP METHODOLOGY

04 SERVICE CATEGORIES

06 EVIDENCE ARTEFACTS

TECHNOLOGY-LED

Stainless tracked crawler, dual-hose turret, forward camera and LED.

DIGITAL MEASUREMENT

Real-time micron readings, including the Teinnova Grasmeter.

DOCUMENTED WORK

Every job leaves a file a facility manager can show.

WHS-FOCUSED

Risk assessments, SWMS and site-specific procedures where required.

The work that sits on the cookline.

Eight capabilities across kitchen exhaust, equipment, front-of-house and exterior commercial — the same contractor already inside the cookline.

SCOPE

21 SERVICES LISTED

04 CATEGORIES

01 WA ROBOTIC PLATFORM

WA METRO EMERGENCY

KITCHEN EXHAUST

Full-system hygiene, measured grease thickness and after-clean evidence.

ROBOTIC EXHAUST

Tracked crawler, dual-hose turret and forward camera — only of this kind in WA.

DIGITAL MEASUREMENT

Instant micron readings before and after, including the Teinnova Grasmeter.

STEAM & EXTRACTION

Professional-grade steam that lifts grease with reduced harsh chemistry.

MEET THE CRAWLER

Robotic kitchen exhaust cleaning.

Grade X operates a stainless tracked crawler for kitchen exhaust interiors — dual-hose high-pressure cleaning, twin turret nozzles, LED lighting and a forward inspection camera.

The only robotic platform of this kind in WA

Currently the only company in Western Australia operating this technology.

- FORWARD CAMERA
- DUAL WORK LIGHTS
- TWIN TURRET JETS
- DUCT FLOOR DRIVE
- LIVE INTERIOR FEED
- STAINLESS TRACKS

Stainless tracked crawler

Chevron-plate tracks and a sealed stainless chassis so the unit can drive grease-slick duct floors instead of sending a person inside.

Twin turret nozzles

An articulating head with two forward jets, fed by dual high-pressure hoses and brass quick-connects — the same layout as this machine.

Inspection camera + LED

Forward camera barrel and dual work lights. Clients can see the interior during the clean, not only a hatch photo after it closes.

Exploded service architecture

Drive motors, track assemblies, rollers and turret are built to be serviced. The build matches this platform, not a generic robot.

How Grade X actually operates.

A dedicated numbered sequence — evidence of a repeatable, professional process, not folded into general service descriptions.

01

Site inspection and assessment

The system is walked, photographed and scoped before any cleaning starts so the method matches the site.

02

Grease thickness measurement

A digital grease thickness gauge — including the Teinnova Grasmeter — captures real-time micron readings.

03

Preparation and protection

Cookline, storage and guest-adjacent zones are isolated and protected. Live kitchens stay on where agreed.

04

Interior steam washing

Professional-grade steam and extraction lift grease inside the exhaust system, with less harsh chemistry.

05

Canopy, ductwork and components

Canopy interiors, filters and accessible ductwork are cleaned as one path. Crawler used where manned entry is unsafe.

06

Final inspection and quality control

The completed system is inspected against the original scope. Missed soil is treated as a defect.

07

Post-cleaning grease measurement

The same digital method after the clean. Before-and-after micron readings sit in the job file.

08

Reporting and documentation

Before/after photos, measurement records, compliance notes and next-interval recommendations.

Service capability

Twenty-one services across four categories. Only the work confirmed on the Grade X website is listed here.

PORTFOLIO

01 KITCHEN EXHAUST

02 KITCHEN EQUIPMENT

03 LOBBY & FOH

04 EXTERIOR COMMERCIAL

KITCHEN EXHAUST & HYGIENE

Exhaust, canopy, robotic cleaning, steam, and cookline equipment hygiene.

KITCHEN EQUIPMENT

Grill recovery, fryer boil-outs, shake machines, cool rooms, nightly and monthly deep cleans.

LOBBY & FRONT-OF-HOUSE

Lobby cleaning, monthly restoration, and Play Place with staff certification where required.

EXTERIOR COMMERCIAL

Floors, pressure washing, drive-thru, windows, line marking and hygiene zones.

DIGITAL EVIDENCE & REPORTING

Verification of completed work.

Objective grease-thickness measurement before and after every clean, live video during the clean itself, and before/after photographic evidence supplied with every job.

WHAT SITS IN THE REPORT

01	**Before-and-after photographs**	Supplied with every job
02	**Digital grease measurement records**	Before and after, objective micron readings
03	**Live video**	During the clean itself
04	**Service reports for the visit**	Areas cleaned and inspected
05	**Compliance documentation**	Held with the job record
06	**Recommendations for future maintenance**	Recorded in the report

Client reporting system

Equipment includes a digital grease thickness gauge with external probe — such as the Teinnova Grasmeter — producing instant micron readings. Before-and-after measurements verify effectiveness objectively, not by visual assessment. Live video is available during robotic cleans.

Compliance, WHS and risk.

Facility managers look for this before engaging a contractor. Exact certificate wording is supplied by Grade X. Current documents are held on file. This is not a claim of ISO certification.

ON FILE

PL
PUBLIC LIABILITY

WC
WORKERS COMPENSATION

WHS
SWMS ON REQUEST

QC
ISO-FOCUSED PROCESS

PUBLIC LIABILITY

Cover in place for commercial site work. Certificates supplied on request.

WORKERS COMPENSATION

Maintained so host sites are not absorbing contractor injury risk.

FOOD-SAFE PRACTICES

Steam-led interior work and protection of food-production surfaces.

STAFF CERTIFICATIONS

Including Working With Children Check where play-place work requires it.

Built for commercial environments.

One specialist partner across kitchen, hygiene, front-of-house and external environments — the same contractor already inside the cookline.

WHO WE SERVE

QSR
FAST FOOD COOKLINES

HORECA
HOTELS · CLUBS

FM
FACILITY MANAGERS

MULTI
SITE GROUPS

QSR & FAST FOOD

High-volume cooklines where fire load, brand standards and trading hours meet.

COMMERCIAL KITCHENS

Hotel, club and restaurant kitchens that need a documented interior clean.

COMMERCIAL PROPERTY

Shopping-centre food tenancies and high-traffic customer entries.

MULTI-SITE OPERATORS

Programmes that can look the same at every store — exhaust, equipment and evidence.

Why Grade X

Credibility, process and accountability. The difference is technology, measurement and a file a facility manager can show.

AT A GLANCE

01
WA ROBOTIC PLATFORM

08
DOCUMENTED STEPS

06
EVIDENCE ARTEFACTS

WA
METRO EMERGENCY

TECHNOLOGY-LED

Currently the only company in WA operating this robotic kitchen exhaust platform.

DIGITAL MEASUREMENT

Instant micron readings before and after. Visual “looks clean” is not the metric.

LIVE INSPECTION

Forward camera and dual work lights. The interior is visible during the clean.

BEFORE & AFTER EVIDENCE

Photographs, measurement records, and live video on robotic cleans.
